

## FAQ

### 1. What is Research?

Research designates an activity designed to test a hypothesis, permit conclusions to be drawn and thereby to develop or contribute to generalizable knowledge, whereas “practice of medicine” refers to interventions designed solely to enhance the well-being of an individual patient. Research subjects may or may not benefit from research procedures.

### 2. Are there risks?

The risks involved in this study are minimal. There is a chance you/your child may hear loud bangs or have a claustrophobic experience during the MRI. Precautions will be taken to minimize these unpleasant experiences. MRI doesn't expose you/your child to radiation.

### 3. What will this cost?

The study will not cost you/your child anything. You will not be charged for the MRI. You/your insurance will be responsible for any medical costs outside of the study (ex. The ER visit). You/your child will not be paid for the study.

## The Concussion Study

A prospective study of the relationship of neuropsychological and motor performance parameters with magnetic resonance imaging in athletes with mild traumatic brain injury (concussion).

*Looking at the brain and thought patterns of football and soccer players after concussion.*

#### The Concussion Study

*A prospective study of the relationship of neuropsychological and motor performance parameters with magnetic resonance imaging in athletes with mild traumatic brain injury (concussion)*
